Looking to better utilise your in shed cereal grain?

With Advanced Feeds complimentary relationship with the Dairy Business Centre (DBC) and our expertise in manufacturing and supplying supplementary feed to some of the region's top performing herds, many new and existing clients look to Advanced Feeds to provide nutritional support and advice. This is critical at vital times both in the lead up to calving, during peak nutritional demands on the cow and in periods of changing seasonal quantity and quality of feed in the paddock

Why not see what Advanced Feeds can offer your herd to better utilise and balance your in shed feed grain feeding via its range of cereal balancers or we can process your cereal grains and precision blend them with the latest in minerals, additives and rumen ionophores such as Rumensin.

Advanced Feeds Forage Balancer Blends –

A cost effective alternative to Palm Kernel with increased utilisation due to the addition of CMS (Condensed Molasses Solubles)

Palm Kernel or an Advanced Feeds Forage Balancer Blend suitable for trough feeding in the paddock?

An extended range now available with the added inclusion of rolled grains from between 20-50%.available on request

Research findings from AgResearch reported in 2010 that only 51% of PKE is utilised by the cow and the addition of Molasses with PKE lifted rumen digestibility by 37% (relative percentage).

Therefore the addition of CMS (Molasses Solubles) to PKE therefore helps rumen micro organisms better utilise PKE.

Advanced Forage Balancer blends are available ex Timaru or Methven

Typical Nutrient Analysis

Forage Balance Range from

Protein	ME (Mj/Kg DM)
15.2 - 21.6	11.3 – 11.9

Planning to increase cereal grain levels in shed during 2011-2012

What effects to your cow's rumen will this have?

Does your in-shed supplement tick all the boxes for a nutritionally balanced diet for your herd? Concerned about cows with Acidosis or Subclinical Acidosis during springtime?

Talk to us at Advanced Feeds now and plan your herd supplement requirements

Looking to simplify the way you supply feed minerals / ionophores such as Rumensin / Trace Minerals / Proteins / Rumen Buffers.
